

THERE'S SOMETHING ABOUT MODELS...

Models are VERY different!

The "Design Dialogue" model: Selling a new way of working

Contemporary innovation models

Features for our modelling?

Models are VERY different!

"Models: The third dimension of science", 2004

Function: to bring the modelled (e.g. the tiny, the far away, the future, the evasive, the complex) within reach

Purposes: to demonstrate theory, to look good, to make fruitful analogies

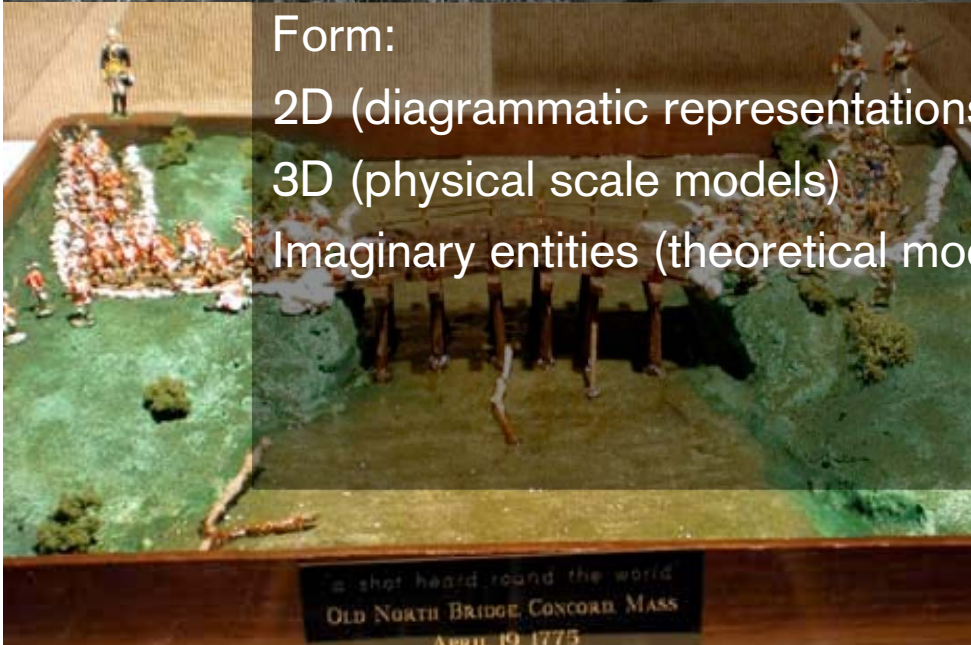

Descriptive of actual phenomena or prescriptive of ideal phenomena

Form:

2D (diagrammatic representations on flat surfaces),

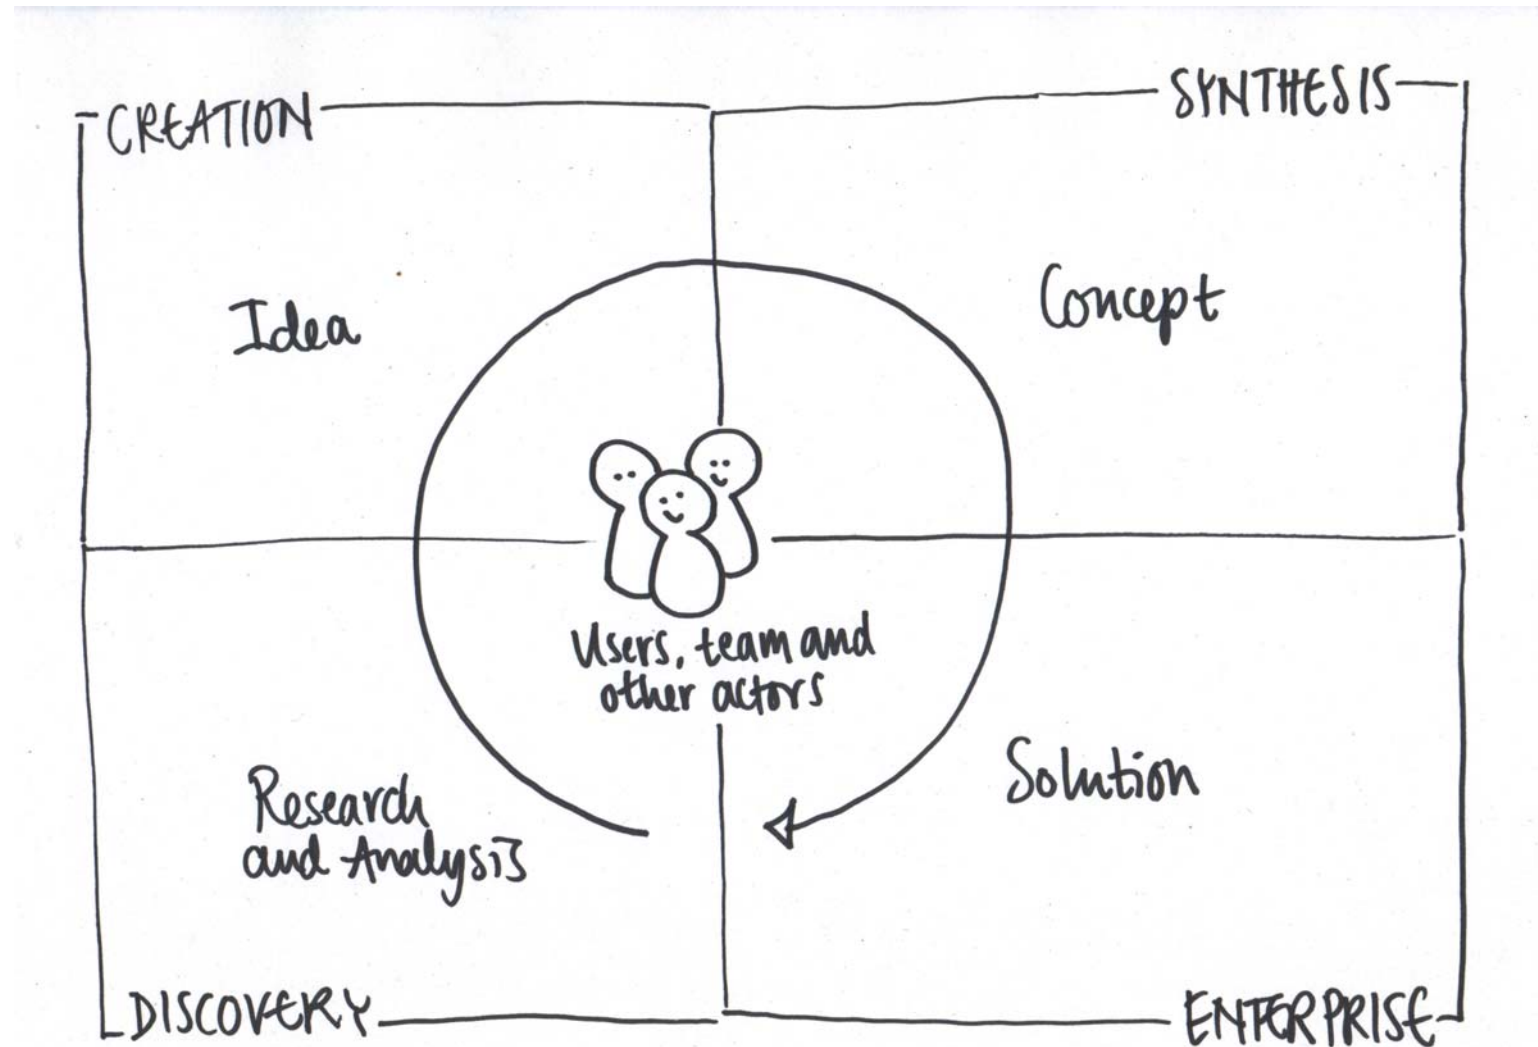

3D (physical scale models)

Imaginary entities (theoretical models)

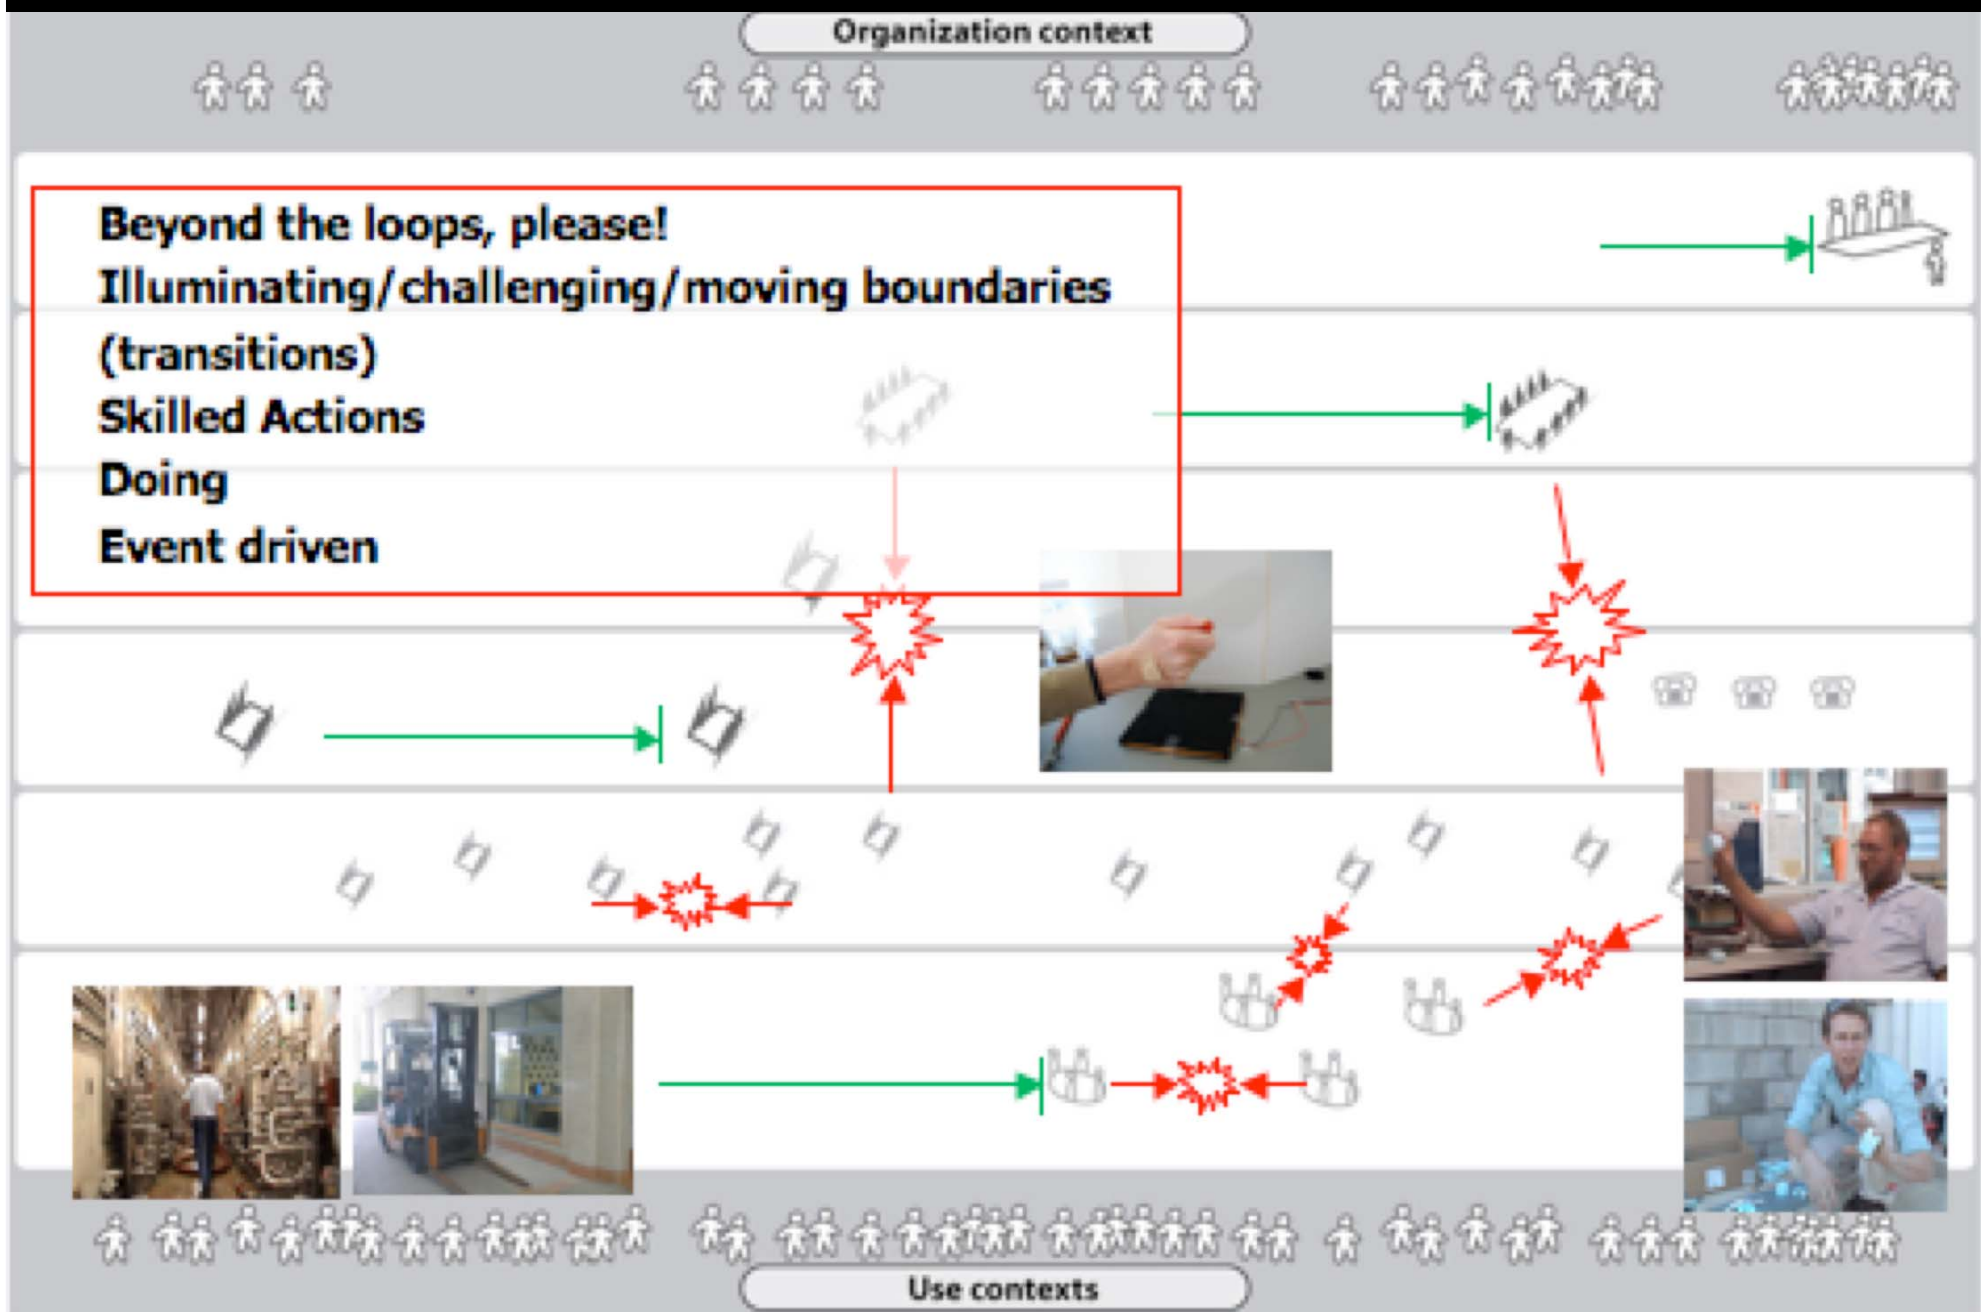

The "Design Dialogue" model:
Selling a new way of working

1508: coherent rendering of process

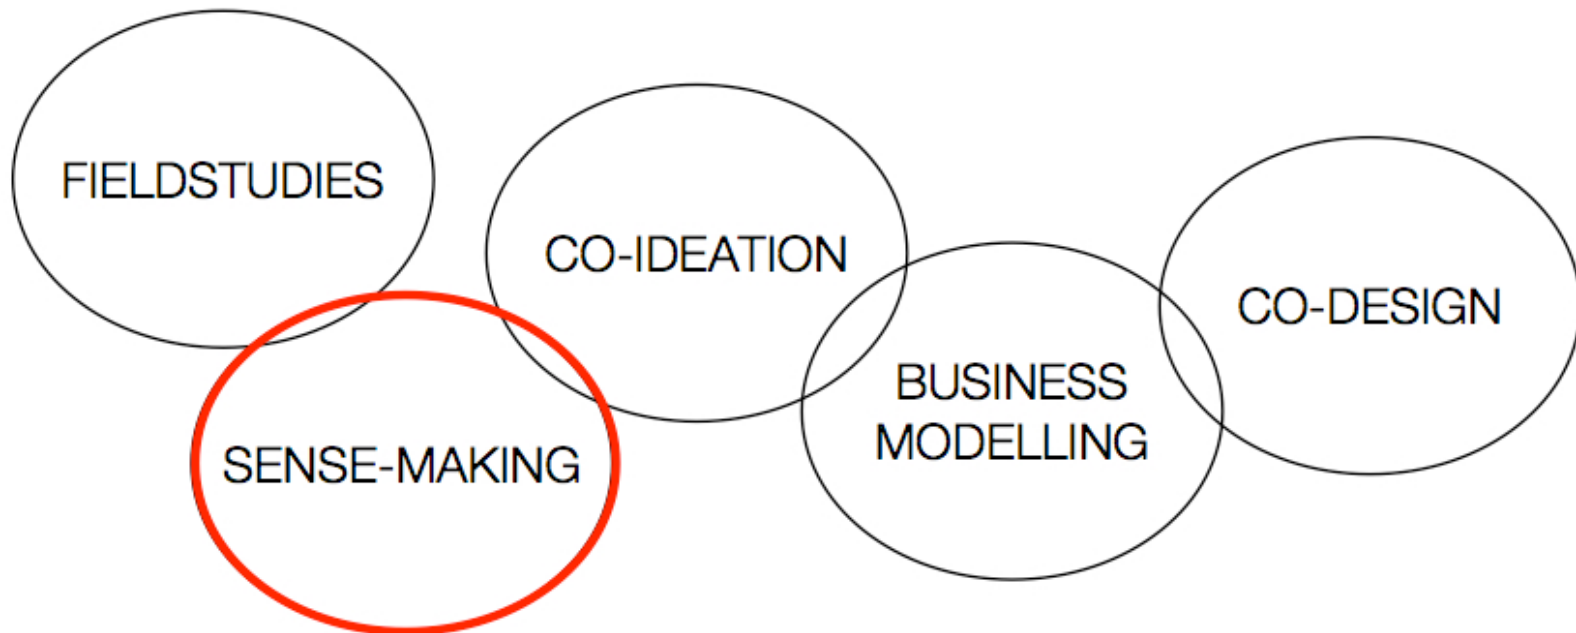

SPIRE: describing complex past experiences

SPIRE: promote core activities

Participatory Innovation

Et forløb af aktiviteter i samspil med brugere

Dobbelt formål:

Viden om brugere, inspiration til at gen-tænke praksis

Forretningsmuligheder i form af produkter, services, organisering

DKDS: study both users and client/system

DKDS: exploring the complex

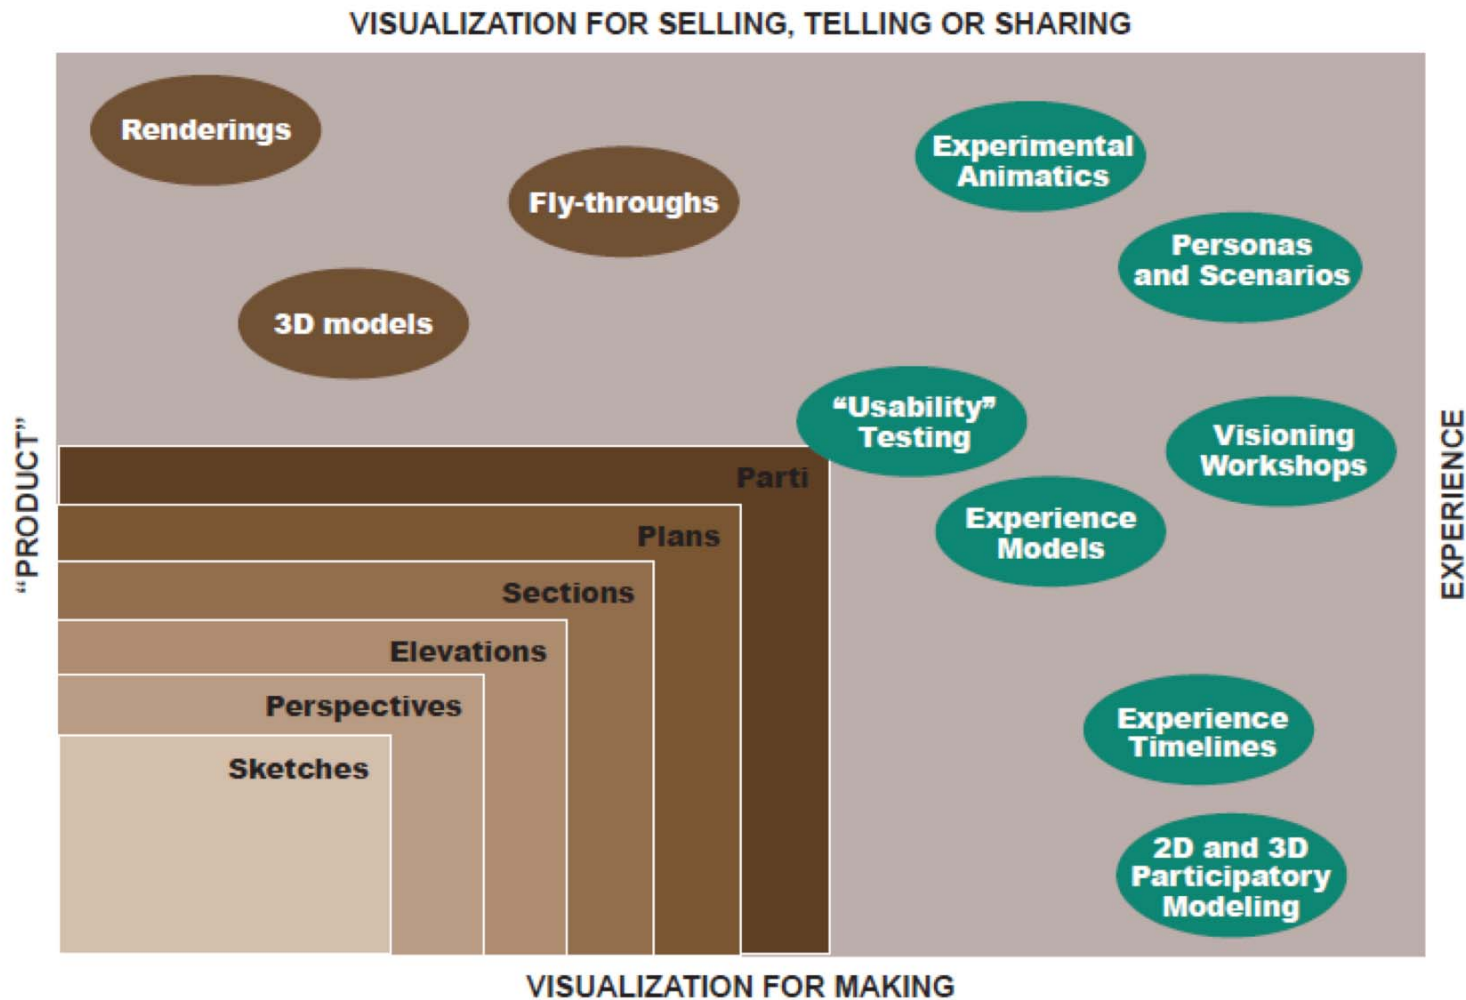

**A DAIM
Dragon tail**

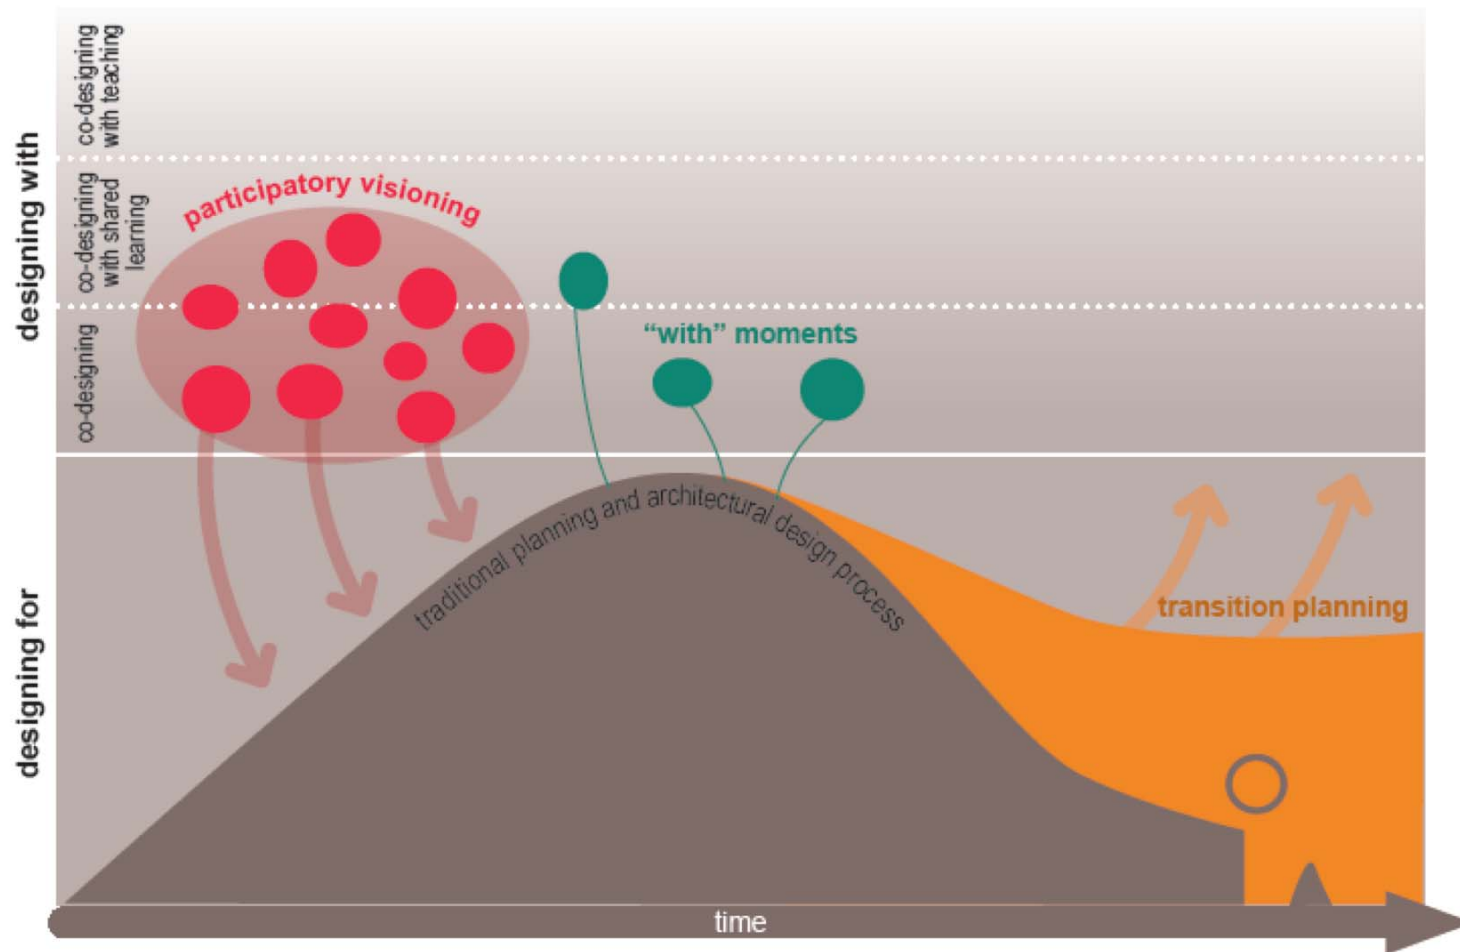

to print

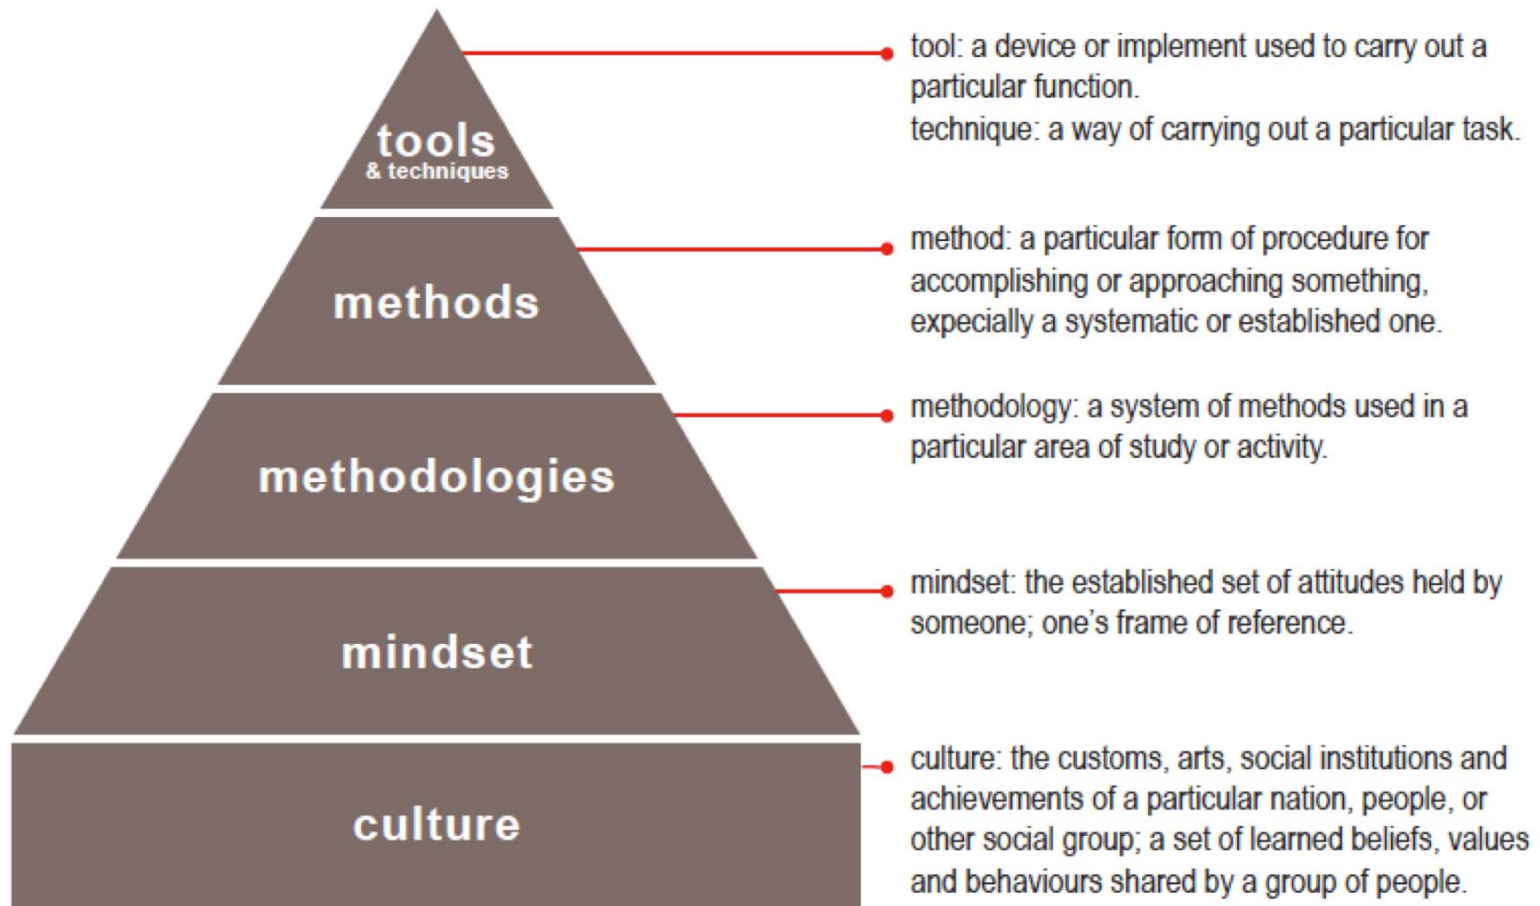

MAKETOOLS: New forms of visualization

MAKETOOLS: designing *with* the client

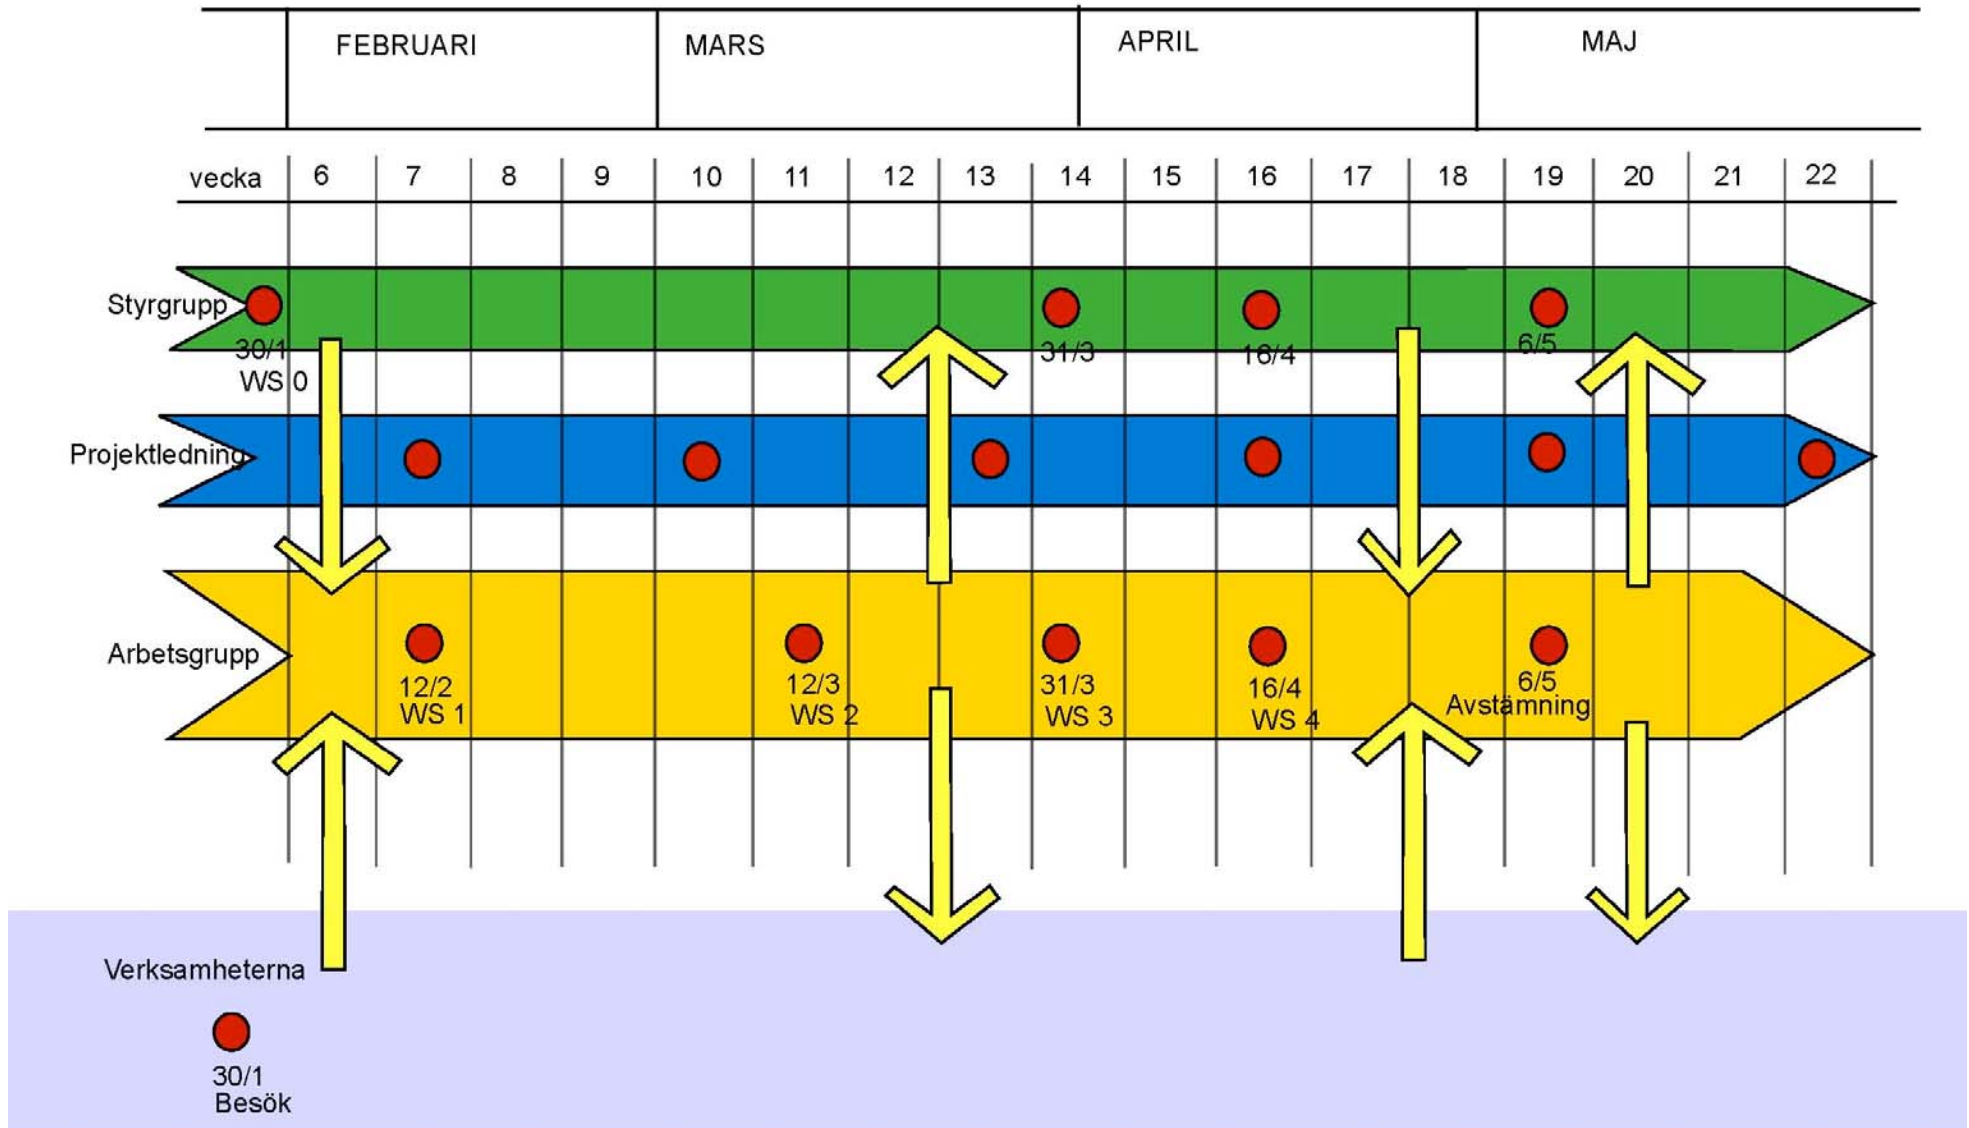

MAKETOOLS: defining and clarifying concepts

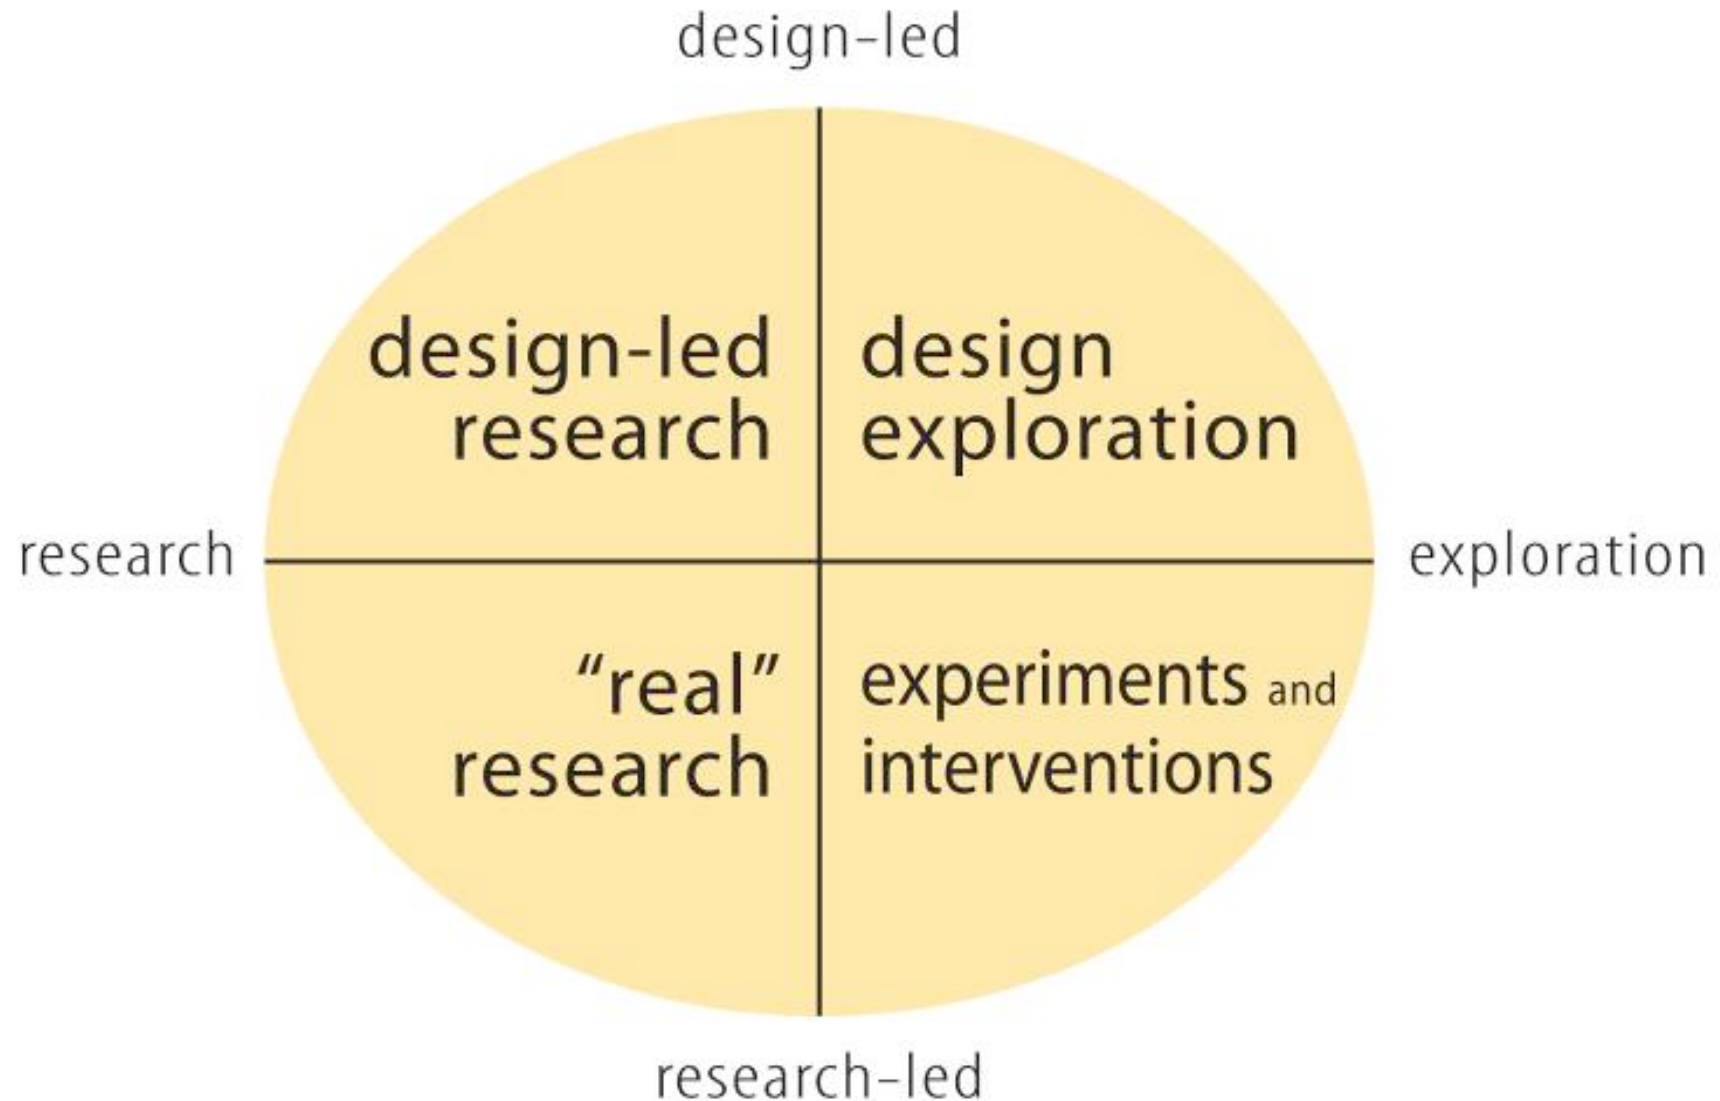

SWECO: a model that sells

SWECO: plan for control

MAKETOOLS: discovery framework

MAKETOOLS: ideation

Information

Values reliability, validity and rigor

Builds upon investigation, analysis and planning

Relies on extrapolation from the past as a way to move into the future

Inspiration

Values relevance, generativity and evocativeness

Built through anticipatory thinking, ambiguity and surprise

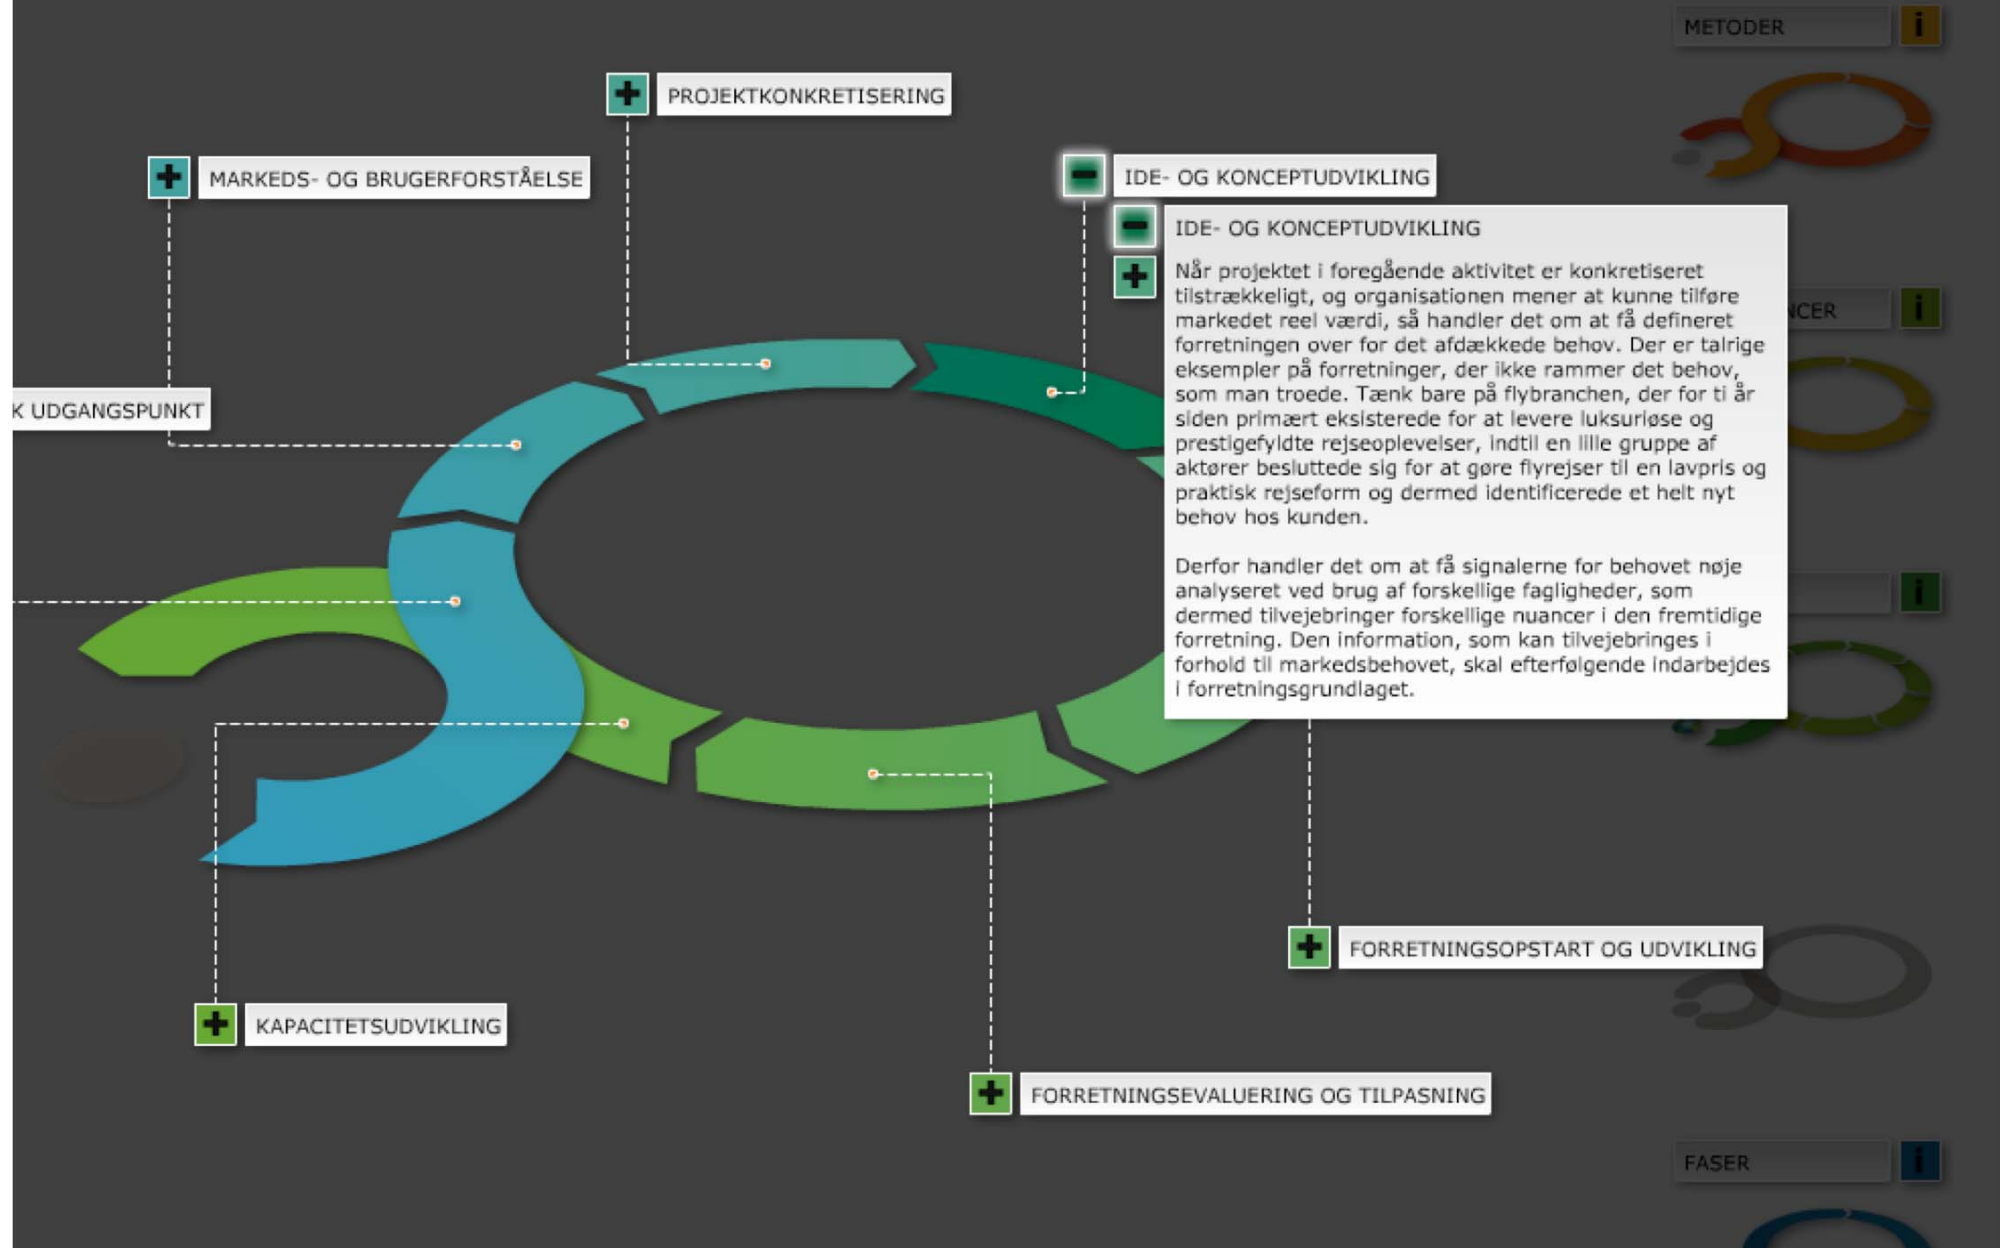

Draws primarily from the future, using imagination as the basis for expression

CONTEMPORARY INNOVATION MODELS

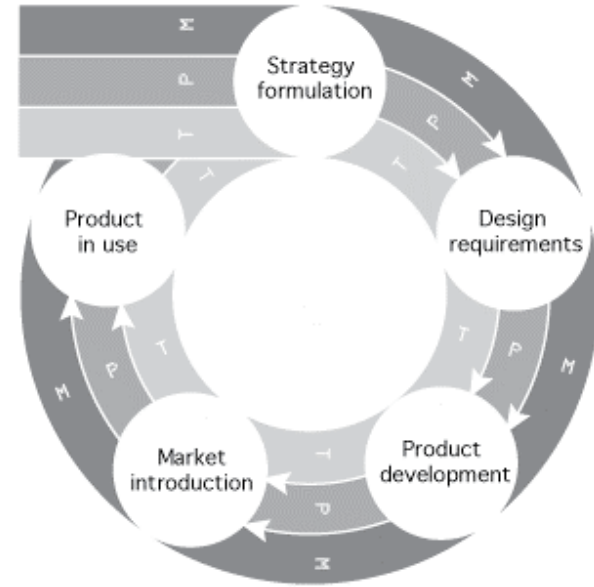

SEQUENTIALITY
strength and weakness

DESINOVA STRATEGIC INNOVATION MODEL: non-linearity *and* phases!?

CIRCULAR, CLOSED & OPEN INNOVATION MODELS

Closed innovation model

UPA: explaining new practices to themselves

designing the user experience

Copies must bear this notice and the UPA logo. Any other use requires specific permission from UPA.

CORSA SENZA FRENI

Design avveniristico e materiali tecnologici: la sperimentazione sulle bici non conosce sosta. Ecco alcuni modelli

Senza catena

Trek District Bike: al posto della catena monta una cinghia in fibra di carbonio. 725 euro • trekbikes.com

Pieghevole

Mp Uno: una bici pieghevole con ruote da 16" e freno posteriore a pedale. 450 euro • dahon.com

Luci nel telaio

Da un progetto di Bortolani e Righi, la Plus Bike: il telaio incorpora i fari anteriori e posteriori. • dovetusa.it

Artigianato italiano

Modello Fuga di Abici, prodotta artigianalmente in Italia, ricorda le bici da pista. 950 euro • abici-italia.it

È la bicicletta che fa girare il mondo

"Bike sharing" e investimenti per le piste ciclabili, integrazioni con autobus e metropolitane e domeniche chiuse al traffico: si moltiplicano nel mondo le iniziative per promuovere l'uso della bicicletta. Un mezzo di trasporto ecologico, economico e "city friendly". Insomma, il mezzo del futuro

- di Francesco Franchi

DUE RUOTE RADDOPPIANO LE QUATTRO

La produzione mondiale di biciclette ha toccato quota 130 milioni nel 2007: più del doppio rispetto ai 52 milioni di auto immesse sul mercato. Il boom registrato dopo il 2004 è in parte dovuto alla crescente domanda di bici elettriche

28,1 metri: è quanto misura la bici più lunga del mondo

BIANCHI, ATALA, BOTTECCHIA, COLNAGO

Nella classifica dei maggiori produttori mondiali di biciclette l'Italia si piazza alle spalle di Cina e Taiwan: due colossi che riforniscono i mercati di mezzo globo. I maggiori importatori sono gli Stati Uniti

MADE IN ITALY A MARCIA INDIETRO

Nonostante i trend mondiali di crescita generale, in Italia la produzione di bicicletta è andata calando negli anni

PEDALA RAGAZZO, PEDALA

In Italia la metà delle bici prodotte è costituita da modelli da bambino. Le mountain bike rappresentano un quarto degli ordini

SUL SELLINO CHE NOI PORTIAMO

Oltre al prodotto finito, il nostro Paese produce anche molti componenti per biciclette. I pezzi più esportati (per valore commerciale) sono cambi, selle e cerchi

INFOGRAPHIC: one narrative, many models

FEATURES FOR OUR MODELLING

OVERALL PURPOSE: selling? — doing? — understanding?

PARAMETERS (raw material for new diagrams and mini models):

AUDIENCE: clients — consultants — students — design researchers

META:

descriptive — prescriptive

map — process — framework

APPROACH:

design-led — research-led

expert mindset — participatory mindset

rational analysis — analysis as social negotiation

for client — with client

change to understand — understand to change

by discipline (eg. graphical design) — by outcome (eg. a service)

TOOLS + TECHNIQUES:

visualization for making — visualization for selling, telling, sharing

brainstorm — bodystorm

familiarization — estrangement

information — inspiration

PROTOTYPING:

product functionality — interactive experience

generative prototypes — evaluative prototypes

IMPACT:

new products and services — organizational shift

solve problems — device new questions,
reframing

current — future
